Art Unit: 1712

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 to 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Gruber et al.

Gruber et al. teach contact lenses. Particularly note column 14 which details the monomers A1 and A2, which correspond to claimed component (c), monomer B2, which corresponds to claimed component (a) and D1, corresponding to claimed component (b). Table 2 on column 16 shows various examples which form the monomer mixture required by the instant claims. See for instance No. 13, which meets the amounts in claims 2 and 3. This anticipates the instant claims.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 6 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gruber et al. in view of JP 08227001, abstract.

The teachings of Gruber et al. are noted supra. This reference fails to teach a hydrophilicated surface on the contact lens. JP 08227001, abstract, teaches a method of improving wettability, durability and contamination resistance for contact lenses by surface treating the lens, thereby forming a hydrophilicated surface. One having ordinary skill in the art would have been motivated to form a hydrophilic surface on the contact lens of Gruber et al. in an effort to improve the various properties of the lens as taught by JP 08227001. In this manner the skilled artisan would have found the claimed lenses obvious.

Art Unit: 1712

5. Ellis et al. is cited as being of general interest. Column 5 teaches the addition of monomers meeting component (b) in an effort to modify hardness of the contact lens, but does not specifically show a monomer mixture of (a), (b) and (c) as claimed.
